

KATOOMBA MARS INDUSTRIES GROUP

July 2019

Project Brief:

VIKIN was engaged to provide a waterproofing solution for a multi level residential building foundation at Katoomba in the Blue Mountains.

Summary:

The Onsite Detention tank, retaining walls as well as lift pits have been waterproofed using Polybit GC - designed as an economical long term solution for many demanding waterproofing applications. Tough weather conditions in the mountains lead to flooded areas hampering the waterproofing work on site. However, strategic step by step application of the membrane and diligent membrane sealing allowed for a great progress of the waterproofing project.

Waterproofing Solutions Employed:

VIKIN FC sealant
Polybit GC
